Event Horizon Fund — Step 6 Independent Final Review

Reviewer: Codex. **Review date:** November 10, 2026. **Cycle:** November 8, 2026. **Synthesis model:** Claude. **Reviewed:** adopted V10.1. **Result: V10.2 adopted after Step 6 review.** The price date remains **November 9, 2026 close**; terminal date remains December 31, 2030.

1. Summary

The adopted portfolio needed a small rule-driven correction, not a rebuild. The already-tested STRL-8 alternative passes the second branch of PROMPT_5 rule 2. D4 incorrectly rounded its advantage to “within noise” and treated the 6% residual as if the other allocation were unavailable. Move **STRL 6 → 8%, VRT 15 → 14%, MU 15 → 14%**. Every other holding and weight stays unchanged.

- **Reproduction: PASS, before judgment or edits.** Both Step 5 output JSON files, all five `tables5/` Markdown files, and `drift_nov9.json` matched byte for byte in scratch. No original output was overwritten.
- **Decisions: 3 Upheld, 10 Upheld with correction, 1 Overturned (D4 sizing only)**; all D1–D14 audited.
- **Findings: 31 fixed findings (F02–F32)**, grouped by root cause rather than repeated occurrence; **5 noted/no-change findings (F01, F33–F36)**. Recommendations are separately listed below. Fixes include the sizing correction, not 31 separate investment decisions.
- **Self-siding attribution, mutually exclusive: Codex 6** (D2, D6, D8, D11, D12, D13); **Claude 4** (D1, D3, D5, D10); **both 3** (D7, D9, D14); **mixed/neither 1** (D4). Total 14. These counts describe the substantive outcome relative to the passes, not a model accuracy score. D4 retains Codex's inputs and Claude's VST funding, but adopts neither author's proposed size.
- **Own rejected proposals:** WCC remains rejected, including after fixing its duplicate SBC charge; NVT-funded STRL-5 is not restored; neither SANM nor ONTO is added; no higher-multiple policy is imported. The changed size is the exact alternative already in Claude's Step 5 portfolio set, not a newly invented optimization.
- **Records:** Step 1–5 files, Decision Log, Candidate Ranking and existing superseded files were left unchanged. Copies of the final and Deployment Strategy MD/PDF were preserved as **“V10.1 before Step 6”** before edits. New code/data are confined to `inputs/research/codex_final_review/`.
- **Execution:** no orders, account changes, commits or pushes were made. The Deployment Strategy remains local/gitignored.

Before and after: same model, prices and caps

Holding	V10.1	V10.2	Change
NVDA	15%	15%	—
META	15%	15%	—
VRT	15%	14%	−1pp
MU	15%	14%	−1pp
NRG	12%	12%	—
NVT	12%	12%	—
CLS	10%	10%	—
STRL	6%	8%	+2pp
Total	**100%**	**100%**	**0**

Metric	Step 5 V10.1	Step 6 V10.2	Change (pp)
Expected CAGR	15.3604%	15.4847%	+0.1243
AI-2027 Scenario CAGR	24.0352%	24.1243%	+0.0891
100GW 2030 Scenario CAGR	38.1021%	38.1747%	+0.0726
Bust total return	-61.5326%	-61.4798%	+0.0528
Delay total return	-22.3491%	-22.1233%	+0.2258

The unrounded Expected gain is **0.1243311483pp**, AI-2027 **0.0890722351pp**, and the bust **improves 0.0528019562pp**. Rule 2 requires +0.25pp Expected **or** +0.1pp Expected with higher AI-2027 and no more than 1pp worse bust. The second branch passes. The WCC input correction has **zero effect on this test**, since neither portfolio owns WCC; every held-name valuation input is unchanged.

Constraint proof: max position 15%; NRG/NVT 12%; CLS 10%; STRL 8% below the adopted 10% satellite limit; NRG + STRL **20%**, exactly the existing Texas limit; C1 **39%** below 50%; eight names; no leverage or options; Moonshot 0%; Foundation and Continuity unchanged. V10.2's bust remains milder than V9.1's −67.3%. D4 explicitly described 6% as a *residual*, not a newly adopted hard cap. Codex's earlier 5% recommendation was not the adopted constraint. No cap was relaxed to obtain this result. If the owner wants a new hard STRL ceiling below 8%, that is a new constraint and needs a new funded allocation.

Small is not certain: the formal pass is much smaller than the model's roughly ±2pp error band. It satisfies the owner's stated rule; it is not statistically demonstrated investment superiority. V10.2 has more contractor/Texas exposure, and reaches the Texas cap. A different preference for project risk would be a new owner constraint, not grounds to silently ignore rule 2.

2. Reproduction and numerical provenance

The three Step 5 commands in `claude_synthesis/README.md` ran with that directory as working directory, redirecting both model outputs and all table/data destinations into:

`C:/Users/00MrK/AppData/Local/Temp/ehf_step6_eb701102b07a4717b8c1b19391edb9a9`

That scratch folder contains the runner and command outputs. Persistent evidence is `codex_final_review/data/reproduction.json`, including full original/reproduced SHA-256 hashes. All eight comparisons passed:

Artifact	SHA-256 prefix (full hash in manifest)	Result
`step5_out.json`	`f32a910c2f79d70f`	Identical
`step5_out_cxmult.json`	`f538a694c2d985c9`	Identical
`drift_nov9.json`	`104010807ed263d5`	Identical
`destination5.md`	`5922728f6126b87d`	Identical
`pool5.md`	`cb3cd14b70217490`	Identical
`portfolios5.md`	`748bdeaf040d5027`	Identical
`recon5.md`	`e40ecad057870573`	Identical
`trades5.md`	`3980c30cb6385ca9`	Identical

`review_model.py` runs the unchanged Step 5 evaluator in memory, asserts that its initial outputs still match, adds V10.2 and three funded conditional portfolios, applies only the WCC duplicate-factor correction, and redirects generated tables to `tables6/`. The portfolio aggregation remains expected terminal wealth followed by annualization; it does not average CAGRs. Price snapshot, horizon, scenario probabilities, sensitivity coefficients, multiple policies and held-name operating bridges remain unchanged. The 60-name pool retains the **Step 5 ordinal order**; WCC's changed return does not cause re-ranking.

Key outputs: `data/rule2_test.json`, `step6_out.json`, `step6_out_cxmult.json`, `ports6.json`, `strl_multiple_sensitivity.json`, `tranche_ledger.json`, `cash_path.json`, and `tables6/`. The independent current-price check is `quote_audit.json`; PJM's public schedule is captured in `pjm_calendar.json`. Source metadata for AVGO/VRT/NVT/STRL is corrected in the overlay, not in historical records.

Re-run from the repository root:

```
python -X utf8 "Analysis 2026-11-08/inputs/research/codex_final_review/review_model.py"
python -X utf8 "Analysis 2026-11-08/inputs/research/codex_final_review/protect_records.py"
python -X utf8 "Analysis 2026-11-08/inputs/research/codex_final_review/verify_review.py"
```

The latter two verify immutable-file hashes and final-document/model consistency. They are not a fresh data pull. The fetch scripts are separate, read-only public-source utilities; rerunning them changes the audit timestamp and should be treated as a later observation.

3. Decision audit: D1–D14

Effects below use **Expected / AI-2027 / 100GW / bust**, in percentage points where a delta is given. “No weight effect” does not mean an input was unchanged.

ID	Step 5 decision	Verdict	Evidence and reasoning	Effect if changed
D1	AVGO base owner EPS $23.50 → $27; remain unheld	**Upheld with correction**	Reported FY28 adjusted target >$30 is corroborated by the call transcript, but the issuer release itself does not state it; claimed Sept 14 reaffirmation not verified. $27/0.87 = $31.03 adjusted EPS: a judgment, not a guaranteed conversion of $30. $23.50 owner EPS versus $30 adjusted did not by itself prove decline. The Oct 27 8-K verifies the contingent ~$43B maximum. Retain the delayed-target judgment and reserve, not a new AVGO purchase.	No held-weight effect; AVGO still 13.5% Expected
D2	Remove VRT/NVT duplicate SBC deductions	**Upheld with correction**	Primary adjusted-EPS reconciliations retain ordinary SBC. Presence of SBC in a CFO bridge does not imply exclusion from adjusted EPS. Stored metadata still described old factors; corrected overlay labels. VRT $7.19 is the adopted consensus anchor, not the $7.15 midpoint of company FY26 guidance.	Step 5 numerical correction retained; no additional held-input change
D3	Reject WCC replacing VST	**Upheld with correction**	Wesco explicitly retains SBC in adjusted EPS; remove the extra 4% charge. Q3's non-DC +7% is historical, not 2027 guidance. The older 5–8% long-term revenue aspiration is not a 2027 ceiling. Claude's lower-growth bridge remains defensible judgment; correcting its rationale does not prove Codex's $44 base. Even after correction, WCC remains far below the marginal holding.	WCC 7.0 → **8.0% Expected**, 10.5 → **11.6% AI**, 16.9 → **18.0% 100GW**; bust unchanged at −54.5%; no holding change
D4	Add STRL, remove VST, size STRL 6 with VRT/MU 15	**Overturned — sizing only**	Existing Step 5 STRL-8 alternative clears rule 2's lower branch unrounded. Inputs and VST funding stand. No new thesis, price, candidate or cap introduced. Rule 4's better-bust fallback would not support rejecting 8% either.	**+0.1243 / +0.0891 / +0.0726 / +0.0528pp** versus V10.1; STRL 8, VRT/MU 14
D5	Bench AVGO, VST/TLN, AEIS, TSM	**Upheld with correction**	A bench is useful but cannot supersede the risk-matched replacements in Part V.C or purchase eligibility. AEIS's issuer filing confirms the business/performance premise; it still does not clear the primary-model swap hurdle. No mechanical AVGO purchase during a shared financing/Taiwan shock.	No baseline weight effect
D6	Texas re-underwrite, not an automatic bill-driven trade	**Upheld with correction**	Existing September TCEQ directive is real; project permits, grandfathering and cash-flow effects require review now. Two simultaneous headlines did not justify the final's contradictory bypass of the review. Remove bypass; confirm economic impact before substitution.	New funded conditional weights NRG 8 / STRL 3 / TLN 9; Expected 15.0%, not a baseline recommendation
D7	Gate MOD on Nov 18 investor day	**Upheld**	Issuer confirms Nov 18. Nov 3 continuing-business report shows spin changed the perimeter, negative H1 FCF and weaker DC gross margin. FY28 targets must bridge to **2030** owner EPS $8.84; no demand for FY28 EPS $8.84.	V10.2 conditional MOD 5 / VRT 11 / NVT 10; Expected 15.7%

ID	Step 5 decision	Verdict	Evidence and reasoning	Effect if changed
D8	NVDA 15; buy only after Nov 17 and status check	**Upheld**	Issuer confirms Nov 17; primary Nov 8 board statement confirms an independent review, not a finding of compromise. No verified adverse conclusion found at review cutoff. Retain event gate and adverse NVDA-8/AVGO-7 vector.	V10.2 adverse conditional Expected 15.2%; baseline remains 15% NVDA
D9	META 15 with household check	**Upheld with correction**	Issuer confirms monetization/capex tradeoff, including Q3 negative FCF. No live household balances/index weights were supplied. Illustrative 8.5% household exposure is not a measured result; direct 7.5% assumes Event Horizon exactly 50%. META is not cash ballast.	No weight effect; execution preflight strengthened
D10	Eight holdings rather than Codex's nine	**Upheld**	The ninth name was WCC; corrected WCC still fails. NRG leverage and CLS cash conversion/capex justify existing confidence caps. Eight names remains defensible without claiming an exhaustive optimizer.	No name-count change
D11	Correct multiple-invariant holding claim	**Upheld with correction**	Step 5's replacement “best under both policies” was also too broad: the concentrated architecture has higher Codex-multiple Expected CAGR but breaches caps; MOD is gated. MSFT 18.0% versus VRT 15.0% exceeds the 2pp band, so AI-2027 cannot automatically tie-break it away.	Narrowed claim; no multiple-policy or holding change
D12	Replace screen “upper bounds”	**Upheld with correction**	Retain favorable-model estimates; identify 29 full A1 underwrites versus 31 screens. Screen downside is not the same test as a full FY2025 bust state. All eight holdings are full underwrites.	No re-ranking or input change
D13	Correct HBM forecast scorecard	**Upheld with correction**	Micron total DRAM+NAND revenue cannot validate industry HBM revenue. Primary prepared remarks support contracted HBM tightness, not a quantified “tighter than modeled” error. Workbook constraint result remains a model output, not empirical proof of every forecast.	Qualitative grade only; scenario probabilities retained
D14	Other Step 4 candidates rejected/ watchlisted	**Upheld with correction**	SANM's new perimeter and adjustment uncertainty, PRIM execution losses, and ONTO's weaker return versus MU's named-scenario exposure remain defensible reasons. Restore omitted EME/IESC/ HUBB comparisons and explicit review conditions. Different authors' Step 4 returns are not new A1 ranks.	No additions; no new candidates or pool re-ranking

Primary evidence register and limits

Accessed November 10, 2026. A successful lookup verifies the cited fact, not all forecasts derived from it. Forecast inputs remain analyst judgments unless explicitly labeled company guidance.

1. **AVGO (D1):** Q3 issuer release confirms reported results and the SBC-excluding reconciliation; Oct 27 8-K, Item 2.03 confirms the maximum contingent backstop. The >$30 target is in a third-party call transcript, not independently authenticated issuer audio. That remaining primary-source gap is disclosed; it is not converted into certainty or used to enlarge the holding.

2. **VRT/NVT (D2):** Vertiv Q3 adjusted EPS reconciliation and nVent Q3 reconciliation. Ordinary SBC is retained. nVent FY26 $5.36–5.39 supports the $5.38 rounded anchor; VRT company midpoint $7.15 differs from the retained $7.19 consensus snapshot.
3. **WCC (D3):** Q3 earnings release and Q1 investor deck, PDF page 13 adjusted-EPS note. SBC/cloud amortization are retained in adjusted EPS but excluded from adjusted EBITDA. The older long-term aspiration is not a current 2027 sales guide. Apply only `stored EPS / 0.96` to plateau/base/bull: **18.3854167 / 28.4166667 / 36.9375**, retaining bust 13.05, 15×, probabilities, sensitivity and dividends. This reverses a duplicate factor; it does not assume a new growth path or infer unrounded source inputs.
4. **STRL (D4):** Q3 release. Signed versus combined backlog and sub-1.0 signed book-to-burn matter; unsigned pipeline is not a firm order. The adopted operating bridge remains unchanged. Sensitivity is regenerated at 14×/12×/10.3×: **19.5159% / 15.1501% / 10.9809%**, not the earlier ~10%/~6% prose from another earnings case. The original bridge already contains explicit owner-EPS/SBC and cash conversion assumptions; these are now summarized in the final without adding retained FCF twice.
5. **Texas (D6):** Governor's September 21 TCEQ directive. Administrative restrictions predate the prospective legislation. The page was searchable but intermittently timed out on direct opening; no project-level legal exemption opinion is claimed. Existing power, contracts and new-campus permissions are distinct exposures.
6. **MOD (D7):** Nov 18 event announcement; Nov 3 results. H1 FCF −$145.6M and DC gross margin 19.7% support retaining the gate; no claim the gate has passed.
7. **NVDA (D8):** Nov 8 board statement; Nov 17 earnings announcement. The statement is primary evidence of a review, not of reported foreign-intelligence allegations or a completed clearance.
8. **META/NRG/CLS (D9–D10):** Meta Q3, NRG Q3 and 2027 guidance, Celestica Q3. These support the retained business and confidence judgments, not a verified household look-through. CLS's lower FCF guidance and higher planned capex still justify the 10% cap.
9. **HBM (D13):** Micron September 30 prepared remarks, page 3 `[STALE >30d]`: most CY27 HBM bits contracted with higher year-over-year prices. This corroborates scarcity qualitatively. It does not measure the workbook's global HBM-only revenue series. No forecast probability was raised merely because a different revenue aggregate grew quickly.
10. **Other candidates (D5/D14):** AEIS Q3, Sanmina FY26, Onto Q3, Primoris Q3, EMCOR Q3, IES Q3 `[IES STALE >30d]`. Strong reported growth does not itself settle owner cash, acquisition adjustments or equal-model expected return. Hubbell's previously cited page returned 403; its Step 4 comparison is retained as historical model work, not represented as freshly verified.

Completeness and self-siding checks

The merged Owner Decision Sheets cover Claude C1–C4 through D1/D4/D5/D6; Codex O1/O2 through D3/D4; all Step 3 E1–E5 through D7/D8/D6/D9/D10; and sanity flags X-S1–X-S6 through D8/D7/D11/D12/D2/D13. D14 covers the remaining outside-candidate conclusions. **No decision-sheet item is missing from the Decision Log.** Some final-report summaries were missing (D5 and D11–D14, and EME/IESC/HUBB); those presentation omissions are fixed without editing the historical log or ranking.

The strongest own-side concern was D3: its source attribution was wrong and its accounting had a double charge. Both are corrected, but neither establishes the stronger Codex forecast. The rejection survives. D1's adjustment/target comparison was also overstated; a defensible delayed-target judgment survives with the source limitation explicit. D5's bench order is a useful default only, and D10's eight-name count follows from rejected WCC. D4's explicit-bridge choice and removal of the weakest holding were defensible; its size was not, under the stated rule. This is why the review changes only that size rather than rebuilding around my earlier pass.

4. Document findings

Locations use section names rather than unstable line numbers. Each fixed root cause may require edits at several repeated locations; the diff-derived section list below is exhaustive.

#	Location	Finding	Severity	Action
F01	Step 5 scripts/data/ tables	All eight reproduction artifacts identical	Wrong number if failed	**Noted, no change:** prerequisite passed
F02	I.D, Reconciliation, V.C; D4	+0.1pp rule-2 branch omitted/ misapplied; rounded STRL-8 edge wrongly dismissed	Wrong action possible	**Fixed:** D4 sizing overturned with unrounded proof
F03	I, Reconciliation, Selection, III–IX, README	Sizing change requires every current weight/rollup/return to agree	Wrong number	**Fixed:** generated V10.2 tables; 100% checksum; 82/18 core/satellite; C1 39/ C3 34; Texas 20
F04	I.D, VI.C, VII, Deployment triggers	Old conditional funding would not match new baseline	Wrong action possible	**Fixed:** MOD 5 from VRT/NVT; Texas TLN 9; financing reserve 19; Taiwan reserve 1
F05	IX, Deployment §§3–4	Trade/tranche/cash path stale after resizing; T1 said it sold every exit	Wrong action possible	**Fixed:** 84.54% turnover; cash 23.78/5.48/8.67/0; 18 of 21 exits in T1
F06	WCC rows, generated model/ table overlay	SBC deducted a second time from adjusted EPS	Wrong number	**Fixed:** reverse 0.96 factor; Expected 8.0210%; no holding change
F07	D3 explanations throughout	Historical/long-run growth described as company 2027 guidance	Wrong action possible	**Fixed:** remove misattribution; preserve lower growth as judgment
F08	IV.1, Appendix A	AVGO adjusted target treated as guaranteed owner-EPS floor; Sept 14 reaffirmation unverified	Wrong action possible	**Fixed:** distinguish measures, judgment and source gap
F09	Model provenance / overlay	AVGO/VRT/NVT/STRL tags did not all describe Step 5 numerical inputs	Wrong number	**Fixed:** overlay tags; no rewrite of historical data
F10	I.E, IV.4	STRL 12×/10.3× sensitivities used old operating case	Wrong number	**Fixed:** regenerate 15.15%/10.98%
F11	IV.4	STRL owner-SBC/history and cash bridge too abbreviated for an added holding	Wrong action possible	**Fixed:** summarize already-adopted bridge; distinguish signed/unsigned backlog and forecasts

#	Location	Finding	Severity	Action
F12	I.E, Reconciliation, III.C, V, VII.D, Q15	“Best under both multiple policies” and automatic MSFT tie-break overstate robustness	Wrong action possible	**Fixed:** primary-model comparison only; no global optimum claim
F13	Intro, III.C, Appendix A	All 60 names implied to have equally complete A1/bust models	Wrong number	**Fixed:** 29 full / 31 screen; frozen ordinal ranks; no upper-bound claim
F14	II.C1	“Tighter than modeled” still claimed quantitative HBM validation	Wrong number	**Fixed:** qualitative scarcity only; HBM-only forecast unverified
F15	V.D, IV.6, Deployment preflight	Household META/FSKAX look-through treated as measured; META implied cash cushion	Wrong action possible	**Fixed:** illustrative assumptions, live verification; negative Q3 FCF acknowledged
F16	V.D, Deployment final checks	Stale 46–47% sleeve estimate could force excess contributions	Wrong action possible	**Fixed:** contribute only after measuring actual sleeve weight below 50%
F17	I.C/E, III, IV.1/2, Selection, V.C, VII, Deployment C	NVDA #1 of 58, MU highest held AI return, cap/top-three statements stale or false; some spreads computed from rounded values; META/NRG incorrectly called the two lowest delay losses	Wrong number	**Fixed:** #3 of 60; STRL highest held AI; MU strongest in its band; two at cap; top-three 44%; spreads use unrounded values; shock preference distinguished from delay ranking
F18	I.D, Selection Rationale	Incomplete decision summary; EME/IESC/HUBB omitted; removed-name count ambiguous	Wrong number	**Fixed:** all D1–D14 summarized; restore three comparisons; 21 V9.1 exits
F19	IV.B, VI.C, Selection	MRNA missing re-entry trigger; grouped AVAV row omitted its trigger; rejected-name conditions incomplete	Wrong action possible	**Fixed:** evidence/valuation conditions, not automatic buys
F20	VII.B, Deployment E/preflight	Two Texas headlines bypassed D6's re-underwrite; existing TCEQ action underweighted	Wrong action possible	**Fixed:** expedite, never bypass confirmation; review operative permits now
F21	IV.1, V.C, VI.C, Deployment bench	Generic bench conflicts with risk-specific destinations and correlated shocks	Wrong action possible	**Fixed:** specific replacement/eligibility overrides generic order; reserve if none qualify
F22	II.B, VII.C/D, Q7, IX, Deployment	Dec 9 PJM opening mistaken for clearing/results	Wrong action possible	**Fixed:** Dec 9 opening, Dec 15 close, Dec 22 results scheduled
F23	Report/Deployment calendars	MU Dec 23, TSM Jan 14 and CLS Jan 27 presented as confirmed without primary confirmation	Wrong action possible	**Fixed:** tentative labels; refresh issuer calendars before orders
F24	II.B3, Appendix A	No primary NVIDIA board source acknowledged; allegations could read as established	Wrong action possible	**Fixed:** cite board statement, distinguish review from findings/allegations
F25	IX, Deployment A/G/R3/R4	Forced Dec 11 deployment; Jan 8 buy date before Jan 10 hold event; 10% cash limit conflicts with blocked trades	Wrong action possible	**Fixed:** review checkpoints; gates override timetables and acceleration; blocked cash allowed temporarily
F26	Deployment §§6/8/10	+1pp tolerance/pro-rata purchases can exceed confidence/Texas caps or approved targets	Wrong action possible	**Fixed:** only eligible remaining gaps; no over-target orders; simultaneous-trigger reconciliation

#	Location	Finding	Severity	Action
F27	I.E, IX, Deployment preflight/tax	Incomplete wash-sale window; illustrative losses imply account tax neutrality	Wrong action possible	**Fixed:** 30 days before/after and relevant household/IRA purchases; actual-lot/tax review
F28	VII.B	Common zero-recovery overlay said to subtract identical CAGR points	Wrong number	**Fixed:** common wealth factor preserves ordering, not equal pp decrement; V10.2 12.6%/9.4%
F29	IV.2	Global common-stock mandate incorrectly called US-only for SK hynix	Wrong action possible	**Fixed:** access/liquidity/valuation unverified, not blanket mandate exclusion; next-cycle candidate work only
F30	VII, Q14	≤55% immediate financing cut conflated with ≤50% prolonged Level 2 action	Wrong action possible	**Fixed:** separate trigger severity and funded review requirement
F31	Model Reconciliation, Appendix C, README	Historical attribution count mixed D4 categories; current overlap/version/ provenance incomplete	Wrong number	**Fixed:** mutually exclusive 6/4/3/1; overlap 71%/92%; Step 6 status/file tree/history
F32	Appendix A, Deployment; audit data	No post-price-date quote check or verification boundary	Wrong action possible	**Fixed:** timestamped 16-name check, no >10% move; no repricing; source gaps explicit
F33	D1/D3/D10	Alternative reasonable growth/multiple judgments could produce other portfolios	Wrong action possible	**Noted, no change:** not permission to restore rejected proposals
F34	D14 / watchlist	New growth data alone do not resolve SANM/PRIM/ONTO eligibility/cash gates	Wrong action possible	**Noted, no change:** retain watchlist/ rejection
F35	Forecast framework	Exact AI timeline, HBM market and loss-of-control probabilities remain uncertain	Wrong number	**Noted, no change:** no new probability estimates or candidate reranking in final review
F36	Historical screens / source gaps	Some screen models, forward-multiple history and calendar/primary-source evidence are incomplete	Wrong action possible	**Noted, no change:** explicitly bounded; recommendations below

Event and current-price audit

PJM's official auction schedule workbook, first worksheet BRA rows 59–61, contains Excel serial dates **46365 / 46371 / 46378**, decoded against 1899-12-30 as **December 9 / 15 / 22, 2026**. Results are no earlier than 4 p.m. Eastern. A summary worksheet's date differs; the detailed activity rows, corroborated by PJM's description of a December 15 close, govern this calendar correction. Dates must still be refreshed before execution. No trading deadline is conditioned on nonexistent December 9 results.

Issuer-confirmed: NVDA November 17, MOD November 18, and AVGO December 9. No confirmed December 23 date was found in Micron's calendar or prepared remarks. TSMC's calendar did not confirm January 14 earnings; monthly revenue dates are different events. Its dynamic monthly-revenue page did not expose October figures in the accessible text, so no newly reported October number is asserted. Other inherited minor read-through dates are not certified by this review and must be checked

at order time. The November 9 geopolitical snapshot is not a claim that legal or trade-policy status cannot change on November 10.

Name	Nov 10 observed price	Change vs Nov 9	>10% flag
NVDA	$168.22	-5.85%	No
META	$644.90	+0.55%	No
VRT	$193.60	-3.43%	No
MU	$718.36	-2.02%	No
NRG	$97.29	-0.11%	No
NVT	$112.69	-1.52%	No
CLS	$225.28	+1.06%	No
STRL	$292.10	+0.49%	No
AVGO	$332.66	+4.13%	No
VST	$130.92	-2.24%	No
TLN	$361.15	-0.55%	No
AEIS	$221.73	+1.11%	No
TSM	$396.62	+2.06%	No
MOD	$103.75	-2.26%	No
SANM	$156.08	+4.30%	No
ONTO	$196.15	+1.09%	No

Quotes were public Yahoo chart observations around **20:27 UTC November 10**, during the session, not closing prices. None crosses the prompt's **absolute 10% move** flag. Saved data include each endpoint, retrieval timestamp, market timestamp and November 9 daily close. The model and buy limits remain on the recorded November 9 snapshot; live trading still requires refreshed eligibility.

5. Recommendations for next cycle / no change now

1. **Uniform pool modeling:** upgrade screen-only candidates to full owner-cash, balance-sheet, dilution and comparable downside models before claiming a universal optimum. Do not re-rank in this review; a corrected WCC return is displayed at its frozen Step 5 ordinal reference.
2. **WCC growth:** test Codex's stronger DC mix and margin bridge against fresh guidance. The incorrect 2027-guide claim is removed, but proving the high case requires evidence, not reversal by default. Retain the 9% judgment for now after removing double SBC.
3. **AVGO:** obtain/authenticate issuer call audio for the FY28 EPS target and any reaffirmation; update actual funded guarantees, customer credit, cash/dilution and the owner-EPS bridge at the December report. No automatic use of the ~$43B maximum as a booked loss.
4. **STRL:** obtain a consistent multi-year *forward*-multiple history and Texas/project/customer exposure breakdown. The ex-post P/E comparison in Step 4 is not equivalent. Track signed order conversion,

CEC execution, SBC and cash conversion. A new hard ceiling below 8% requires explicit owner preference and funded re-optimization; the review cannot invent it.

5. **SANM/ONTO/PRIM and omitted comparisons:** preserve watchlists; reconcile Sanmina earn-out, tariff and continuing-perimeter cash; require PRIM clean execution/cash quarters; compare ONTO against live MU returns after identical owner adjustments. Revisit EME/IESC/HUBB with current financials and better-priced alternatives. No qualifying new swap was demonstrated here.
6. **Higher-multiple policy:** run a separately identified constrained optimization with MSFT and the conditional names if the owner wants that policy. Do not claim primary-A1 invariance or use an AI tie-break outside its 2pp band.
7. **Household and tax data:** obtain actual positions, lot basis, relevant household/IRA transactions and current index constituent weights before deployment. Build one combined risk-target vector if multiple triggers fire. No account tax or look-through result can be certified from this repository alone.
8. **Calendar/process:** record event opening, closing and result dates separately; distinguish confirmed versus estimated earnings dates; make gate/cap precedence explicit in future prompt templates. Do not edit those templates during this final review.
9. **Forecast calibration:** compare like-for-like global HBM revenue, annual capex versus installed-compute cost, and coding automation versus autonomous research capability. AI-2027 remains the central scenario; apparent directional success is not enough to change numerical probabilities without a fresh calibration exercise.
10. **Global investability:** the common-stock mandate is not US-only. Check broker access, liquidity, foreign market/ADR tax treatment and owner valuation for SK hynix next cycle; no new candidate is added now.

These are not instructions to trade, change prompts, collect private account data or expand the mandate automatically. Defensible Step 5 judgments that failed the review's overturn standard remain intact.

6. Sections edited (diff against V10.1 before Step 6)

Final analysis

- Header / process / market-data convention
- Part I: Executive Verdict → B. Allocation: V10.2, eight positions
- Part I: Executive Verdict → C. The decisive changes
- Part I: Executive Verdict → D. Final decisions (Step 5, reviewed in Step 6)
- Part I: Executive Verdict → E. Additional risks accepted in pursuing maximum expected return
- Model Reconciliation → Weights by source
- Model Reconciliation → Every portfolio on the same assumptions (Nov 9 prices)
- Model Reconciliation → How the two models' disagreements were resolved
- Selection Rationale: Chosen vs Considered → Chosen
- Selection Rationale: Chosen vs Considered → Considered, not chosen
- Selection Rationale: Chosen vs Considered → Removed from V9.1

- Part II: Prior-Cycle Accountability and What Changed Since May 10, 2026 → B. What Changed Since May 10 (new evidence only) → B3. Regulatory, governance and geopolitical developments
- Part II: Prior-Cycle Accountability and What Changed Since May 10, 2026 → B. What Changed Since May 10 (new evidence only) → B4. Market backdrop
- Part II: Prior-Cycle Accountability and What Changed Since May 10, 2026 → C. Background-Framework Deep Dive: AI-2027, the Compute Forecast Workbook, AI-2040 and Situational Awareness → C1. Scorecard: how the forecasts have tracked (Nov 2026)
- Part II: Prior-Cycle Accountability and What Changed Since May 10, 2026 → C. Background-Framework Deep Dive: AI-2027, the Compute Forecast Workbook, AI-2040 and Situational Awareness → C3. Forward paths (2027–2030) and the synthesis's scenario set
- Part II: Prior-Cycle Accountability and What Changed Since May 10, 2026 → C. Background-Framework Deep Dive: AI-2027, the Compute Forecast Workbook, AI-2040 and Situational Awareness → C4. What the framework evidence changed in the allocation
- Part III: Zero-Based Portfolio Test and Bottleneck Map → B. The Complete Bottleneck Map (November 2026)
- Part III: Zero-Based Portfolio Test and Bottleneck Map → C. The Zero-Based Ranking (60 stocks after Step 5, Nov 9 prices)
- Part III: Zero-Based Portfolio Test and Bottleneck Map → D. Zero-Based vs V9.1: every material difference explained
- Part IV: Sleeve-by-Sleeve Review, Alternatives, and Forward-Return Analysis
- Part IV: Sleeve-by-Sleeve Review, Alternatives, and Forward-Return Analysis → 1. Accelerators — 15% (NVDA) · *NVDA increase 6% → 15%; AVGO remove 3% → 0%*
- Part IV: Sleeve-by-Sleeve Review, Alternatives, and Forward-Return Analysis → 2. HBM / Memory — 14% (MU) · *Increase 6% → 14%*
- Part IV: Sleeve-by-Sleeve Review, Alternatives, and Forward-Return Analysis → 4. Thermal, Electrical and Site Work — 34% (VRT 14%, NVT 12%, STRL 8%) · *VRT increase 6% → 14%; NVT add; STRL add (Step 5); GEV, PWR, BE remove*
- Part IV: Sleeve-by-Sleeve Review, Alternatives, and Forward-Return Analysis → 5. Power Generation — 12% (NRG) · *NRG add; VST 6% → 0% (Step 5); CEG, CCJ remove*
- Part IV: Sleeve-by-Sleeve Review, Alternatives, and Forward-Return Analysis → 6. AI Platform — 15% (META) · *Add 0% → 15%*
- Part IV: Sleeve-by-Sleeve Review, Alternatives, and Forward-Return Analysis → IV.B Sleeves and Holdings Taken to Zero (V9.1 → V10.2)
- Part IV: Sleeve-by-Sleeve Review, Alternatives, and Forward-Return Analysis → IV.C Cross-Sleeve Candidate Evaluation
- Part IV: Sleeve-by-Sleeve Review, Alternatives, and Forward-Return Analysis → IV.D Forward-Return and Valuation Table (every V10.2 holding)
- Part V: Portfolio Architecture Comparison and Cross-Portfolio Capital Competition → A. Three Architectures, Same Valuation Model (Nov 9 prices)
- Part V: Portfolio Architecture Comparison and Cross-Portfolio Capital Competition → B. Verdict: Core-and-Satellite (V10.2)

- Part V: Portfolio Architecture Comparison and Cross-Portfolio Capital Competition → C. Cross-Portfolio Capital Competition (every V10.2 position)
- Part V: Portfolio Architecture Comparison and Cross-Portfolio Capital Competition → D. Three-Fund Architecture Check
- Part VI: Final Allocation + Checksum (100.0%) → A. Final Event Horizon Fund Allocation: **V10.2 (adopted November 10, 2026)**
- Part VI: Final Allocation + Checksum (100.0%) → B. Change Table (From → To, with specific funding sources)
- Part VI: Final Allocation + Checksum (100.0%) → C. Per-Ticker Decision Framework (every ticker)
- Part VII: Risk, Scenario, and Invalidation Dashboard → A. Scenario Lens (V10.2 vs V9.1, to Dec 31, 2030)
- Part VII: Risk, Scenario, and Invalidation Dashboard → B. Top 5 Risks and Invalidation Triggers
- Part VII: Risk, Scenario, and Invalidation Dashboard → C. Sleeve-Level Monitors (quarterly)
- Part VII: Risk, Scenario, and Invalidation Dashboard → D. What Would *Not* Count as Invalidation
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV)
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q1) What Is the Complete AI Datacenter Bottleneck Map? → Portfolio implication
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q2) Hypothetical (C15): What Would an AGI/ASI Do to Maximize Money? → Updated answer (Nov 9)
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q2) Hypothetical (C15): What Would an AGI/ASI Do to Maximize Money? → Portfolio implication

- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q3) C14: What Are the Top Stocks for the 100 GW Datacenter Buildout? → Portfolio implication
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q4) C16: What Would an AGI/ASI Do to Maximize Its Own Intelligence? → Updated answer (Nov 9)
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q4) C16: What Would an AGI/ASI Do to Maximize Its Own Intelligence? → Portfolio implication
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q5) C17: What Strategy Would an AGI/ASI Use to Beat China in the Race to ASI? → Portfolio implication
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q7) C6: How Big a Deal Is the Need for Power, and Which Power Source Benefits Most? → New evidence since May 10
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q7) C6: How Big a Deal Is the Need for Power, and Which Power Source Benefits Most? → Updated answer (Nov 9)
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q7) C6: How Big a Deal Is the Need for Power, and Which Power Source Benefits Most? → Portfolio implication
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q8) C9: Should the Portfolio Invest in Department of Defense and War Stocks? → Portfolio implication

- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q10) C2: Should the Portfolio Invest in Identity, Provenance, and Compliance Rails? → Portfolio implication
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q14) What Could Prove the Bottleneck Thesis Wrong by 2027? → Updated answer (Nov 9): re-ranked invalidation list
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q14) What Could Prove the Bottleneck Thesis Wrong by 2027? → Portfolio implication
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q15) Is the Portfolio Architecture Optimal Versus Alternative Models? → New evidence since May 10
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q15) Is the Portfolio Architecture Optimal Versus Alternative Models? → Updated answer (Nov 9)
- Part VIII: Targeted Question Reanalysis (November 2026 Update of May Part XIV) → Q15) Is the Portfolio Architecture Optimal Versus Alternative Models? → Portfolio implication
- Part IX: Near-Term Deployment Strategy (Summary)
- Appendix A: Methodology, Data Provenance, and Stale-Input Flags
- Appendix C: Final Verification

Deployment Strategy

- Header / process / market-data convention
- 1. Destination
- 1. Preflight (before any order)
- 1. Trade List (drift basis, % of sleeve)
- 1. Tranche Plan (four tranches, ~3 weeks, catalyst-aware)
- 1. Explicit Trigger Rules (If Scenario X → do Y)
- 1. Price Discipline
- 1. Reserve Deployment Rules
- 1. Calendar
- 1. Final Checks After T4

README

- Active version / Read This First; Current Allocation Snapshot; Sleeve Rollup; Synthesis Log; File Structure. The analysis-flow instructions and background-reading links are unchanged.

The edits are confined to correctness, required missing content, adoption/version synchronization and operational ambiguity. Unchanged source inputs and historical decisions are not silently rewritten. The Step 3 proposal was also compared with the adopted final to distinguish historical VST/NVDA/MOD decisions from current instructions.

7. Final verification

- Exact reproduction passed before review; persistent eight-artifact hash evidence exists.
- All fourteen decisions have a verdict and an evidence-based explanation; the complete Owner Decision Sheet/escalation/flag map is above.
- The only weight change passes rule 2 at unchanged prices, held-name inputs and adopted caps; no new candidate or rank order was introduced.
- Every current target is NVDA 15 / META 15 / VRT 14 / MU 14 / NRG 12 / NVT 12 / CLS 10 / STRL 8 = **100.0%**. Generated table and tranche checks are recorded by `verify_review.py`.
- V10.1 final and Deployment Strategy MD/PDF backups exist. Immutable-file hashes verify no Step 1–5 record was edited.
- The final analysis, Deployment Strategy, README and this Review Log have regenerated PDFs using the repository's `md_to_pdf.py`; PDF text/layout checks are recorded with the validation artifacts.
- No orders, commits or pushes were made. The Deployment Strategy and its backup remain gitignored/local.

This review improves consistency and applies the stated decision rule. It does not certify future returns, every inherited news claim, a complete real-time event feed, or an executable account-specific trade list without the preflight checks.
